The global Terahertz Radiation System market size is predicted to grow from US\$ 14.4 million in 2025 to US\$ 47.9 million in 2031; it is expected to grow at a CAGR of 22.2% from 2025 to 2031.

Terahertz radiation is typically understood to be electromagnetic radiation in the frequency range from roughly 0.1 THz to 10 THz. Such frequencies are higher than those of radio waves and microwaves, but lower than those of infrared light. As the wavelengths are in the range of 0.03 mm to 3 mm, and often below 1 mm, terahertz radiation is also sometimes called submillimeter radiation.

Terahertz radiation falls in between infrared radiation and microwave radiation in the electromagnetic spectrum, and it shares some properties with each of these. Like infrared and microwave radiation, terahertz radiation travels in a line of sight and is non-ionizing. Like microwave radiation, terahertz radiation can penetrate a wide variety of non-conducting materials. Terahertz radiation can pass through clothing, paper, cardboard, wood, masonry, plastic and ceramics. The penetration depth is typically less than that of microwave radiation. Terahertz radiation has limited penetration through fog and clouds and cannot penetrate liquid water or metal.

Global Terahertz Radiation System key players include TeraView Limited, Advanced Photonix, Inc., BATOP GmbH, TeraSense, etc.

China is the largest market, with a share about 30%, followed by USA, and Japan, both have a share about 30 percent.

In terms of application, the largest application is Biological Research, followed by Agricultural Research, Military, Industrial, etc.
