The global Teriparatide API market size is predicted to grow from US$ 1280 million in 2025 to US$ 2282 million in 2032; it is expected to grow at a CAGR of 8.8% from 2026 to 2032.

Teriparatide is a recombinant human parathyroid hormone (PTH) analogue. Its chemical essence is the 1-34 amino acid fragment of human parathyroid hormone PTH, and it belongs to the class of synthetic polypeptide hormones. It is obtained through genetic recombination technology and is the biologically active N-terminal region of endogenous parathyroid hormone. It can specifically bind to PTH receptors, preferentially stimulate osteoblast activity rather than osteoclast activity, promote new bone formation on the surface of trabecular and cortical bones, thereby increasing bone density, improving bone microstructure and reducing the risk of fractures. As the world's first drug to promote bone formation, teriparatide API must meet strict quality standards, including parameters such as purity, impurity content and stability, to ensure its safety and effectiveness in preparations. It is mainly used clinically to treat postmenopausal osteoporosis with a high risk of fractures, male osteoporosis and glucocorticoid osteoporosis.

Teriparatide API is currently in a development stage with fierce competition between original and generic drugs and accelerated technological iteration. In terms of original drugs, Eli Lilly has long dominated the global market, but generic drugs have risen rapidly after the expiration of patents. For example, Chinese local companies such as Borri Pharmaceuticals have seized market share through cost advantages, especially under the promotion of centralized procurement policies, price competition is fierce; in terms of technology, dosage form innovation has become the key, long-acting preparations (such as Xinlitai weekly powder injection) and prefilled injection pens (Liankang Bio's second-generation water injection) have gradually entered the clinic, and at the same time, the semi-weekly powder injection developed by Asahi Kasei in

Japan has become a hit product due to its high compliance. The future trend focuses on the development of long-acting and oral dosage forms, penetration into emerging markets and expansion of indications, while also responding to the dual challenges of centralized procurement policies and alternative therapies.
