Terminal Units for Medical Gas Distribution are systems designed to provide a secure and standardized connection between the central medical gas supply and patient care areas or equipment. These units ensure the safe, controlled delivery of medical gases such as oxygen, nitrous oxide, and medical air, while regulating flow and maintaining appropriate pressure levels. Typically incorporating gas outlets with self-sealing joints, they include components like a self-sealing gas socket and a medical gas probe. When the probe is inserted, it opens a valve to enable gas flow, and when removed, a flexible element closes the valve to stop the release of gas. Built to meet rigorous healthcare standards, these units are compatible with a wide range of medical devices and systems, ensuring reliability, safety, and efficient gas delivery in healthcare settings. Terminal Units for Medical Gas Distribution can cost between $10 and $50.
