Terminated Polyether Polyols are a type of polyol resin used in the production of polyurethane (PU) materials. The term 'Terminated' refers to the presence of functional groups, such as Hydroxyl (-OH) or Amine (-NH₂), at the ends of the Polyether chains. These functional groups play a crucial role in the reaction with Isocyanates to form the cross-linked Polymer network in Polyurethane materials. Terminated Polyether Polyols provide flexibility, durability, and hydrophobicity to the resulting Polyurethane products. They are commonly used in applications such as flexible foams, adhesives, coatings, sealants, and elastomers.

The global Terminated Polyether Polyols market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
