Testing services for medical equipment (TSQE) is a professional technical service system that provides performance verification, safety testing, metrological calibration, and compliance certification for various medical devices and diagnostic equipment, covering multiple dimensions such as electrical safety, radiation safety, accuracy and stability, and clinical reliability. This service is typically provided by third-party testing organizations, certification laboratories, or equipment manufacturers' service departments. It is a crucial component of the medical quality control system, ensuring the safety and accuracy of equipment in hospitals and clinical settings while meeting the regulatory requirements of various countries.

With the digitalization, intelligentization, and increasing value of medical equipment, regulatory standards are becoming increasingly stringent, driving a rigid increase in demand for testing services. Future healthcare systems will place higher demands on the full lifecycle management of equipment, shifting testing from 'periodic inspections' to 'continuous monitoring + predictive maintenance.' Simultaneously, the increase in telemedicine and wearable devices is expanding the scope of testing, enabling the industry to maintain stable long-term growth and gradually upgrade towards intelligent services.
