A tethered drone power supply system is a specialized setup designed to continuously provide electrical energy to a drone that is connected to a ground - based source via a cable or tether. Unlike traditional battery - powered drones with limited flight times, tethered drones rely on this external power source to operate for extended periods. The system typically consists of a ground - based power unit, which can be connected to an electrical grid or a generator, and a power transmission cable that safely conveys electricity to the drone. This cable also often incorporates features to protect the power supply from interference and physical damage. The power is then converted and regulated on the drone side to meet the specific electrical requirements of its motors, sensors, cameras, and other onboard equipment. Tethered drone power supply systems are highly valuable in various applications, such as long - term surveillance, continuous aerial photography, industrial inspections, and emergency communication. By ensuring a stable and continuous power supply, they enable drones to perform critical tasks without the constraints of battery life, enhancing their functionality and effectiveness in numerous professional and operational contexts.
