Text-to-speech software solutions offer significant advantages for educational institutions that employ online/blended learning. These solutions provide students with flexible learning and spare faculties from providing repetitive in-person sessions. These also allow the creation and storage of the speech as a part of the licenses provided to institutions. Many educational experts believe that the incorporation of devices such as tablets, laptops, and projectors in classrooms improves teaching efficiency and enhances the learning procedure. This has inspired many institutions to invest in IT infrastructure to support advanced educational technologies.

The rise in enrollment of dyslexic students in educational institutions is one of the

primary growth factors for this market. The recent years have witnessed a significant increase in the number of dyslexic students enrolling in higher education in several countries across the globe, especially in the developed countries such as the UK. Similarly, the awareness created by the Dyslexia Association of Singapore (DAS) for providing education for dyslexic students, led to the rise in number of educational institutions accepting dyslexic students with the aid of supporting technologies. Since these educational institutions have the need to adopt assistive technologies to help students understand courses better, the coming years will witness a rapid increase in the adoption of text-to-speech education technology.
