A textile braided hose is one of the types of hydraulic hose that is made up of several layers of fabric or yarn. The inner layer of the hose is typically made from a synthetic rubber material, while the reinforcement layer is made from a woven textile material. The layers are then bound together using a special adhesive or vulcanization process. The result is a hose that is strong, flexible, and durable. Compared with the wire-reinforced hose, textile braiding reinforced hydraulic hoses are designed to be used for medium to low-pressure working conditions for hydraulic hose applications.
