efficiency and product quality. It is widely used in the finishing of conventional apparel fabrics, home textiles, and woven products. It accounts for approximately 51% of the market.

3. High-Speed ??Finishing Machines (60-100 m/min)

This type of machine is designed for high-volume, continuous production and is suitable for large-scale orders, standardized products, and export-oriented factories. This type of machine emphasizes high efficiency, energy conservation, and automated integration. It is typically equipped with intelligent control systems, online detection modules, and remote monitoring interfaces, adapting to the development trends of smart manufacturing and Industry 4.0. Market share: approximately 23%.

Upstream and Downstream Situation Analysis

Upstream raw material and technology supply: primarily stainless steel plates, high-temperature resistant alloys, motors, PLC control systems, sensors, hot air generators, thermal oil boilers, etc. Automation and energy-saving control technology is provided by industrial control giants such as Siemens, Schneider, and ABB.

Downstream application industries: encompassing apparel manufacturing, home textiles, industrial fabrics, functional fabrics, and non-woven fabrics. Downstream customers primarily include large textile processing plants, printing and dyeing companies, brand contract manufacturers, and export companies.

Technological Trends and Innovation Directions

Intelligent Control and Automation Upgrade: Introducing a PLC+touchscreen system to achieve digital management of the entire process, including precise temperature control, fabric speed synchronization, and tension adjustment, supporting remote monitoring and energy optimization. Green Energy Saving and Environmental Emissions: Developing low-energy hot air circulation systems and closed-loop exhaust gas collection and treatment equipment to address tightening global environmental regulations. European, Japanese, and Korean markets are placing higher demands on carbon emissions and VOC control. Multifunctional, integrated design: Composite production lines integrating drying, shaping, softening, and wrinkle removal are becoming a trend, helping to save space, reduce energy consumption, and improve production efficiency.
