The textile fiber composition tester is a device used to determine the composition of textile samples. This type of tester typically works by burning small samples of textiles and analyzing the resulting ash. Different fibers burn differently, and the resulting ash can be used to identify textile fiber composition. The fiber composition tester is an important tool for textile manufacturers, as it allows them to verify the composition of the product and ensure that it meets industry standards. Textile testing laboratories also

use it to verify the composition of textiles for quality control and regulatory compliance purposes.
