A textile heat setting machine is a device that uses heat energy to set the shape of textiles. Through processes such as heating, stretching, and cooling, the molecular structure of fibers or fabrics is rearranged and stabilized, thereby improving the dimensional stability, smoothness, and appearance quality of the fabric. This equipment is widely used in the production processes of chemical fibers, knitting, weaving, and nonwoven fabrics. It can effectively prevent fabric deformation, curling, or wrinkling, and improve the quality and efficiency of subsequent printing, dyeing, coating, and other processing steps. It is a key piece of equipment in modern textile finishing processes.Sales in 2024 will be 59,000 units, with an average price of US$36,000.The annual production capacity of large enterprises is more than 3,500 units, that of medium-sized enterprises is 1,500-3,500 units, and that of small enterprises is 0-1,500 units.The gross profit margin is 37%.
