The global Textile Surfactants market size is predicted to grow from US\$ 2886 million in 2025 to US\$ 4015 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

In 2025, global Textile Surfactants production reached approximately 1.34 million tons, with an average global market price of around USD 2,200 per ton.

The gross profit margin of major companies in the industry is between 13.84%?27.36%.

In 2025, the global production capacity of Textile Surfactants was approximately 1.76 million tons.

Textile Surfactants are specialty surface-active chemicals used in fiber processing, pretreatment, dyeing, printing, finishing and washing operations. They improve wetting, emulsification, dispersing, leveling, scouring, softening, antistatic performance and detergency during textile manufacturing. The product includes anionic, nonionic, cationic and amphoteric surfactants formulated for cotton, polyester, nylon, wool and blended fabrics. The market includes surfactant ingredients and formulated textile auxiliaries with surfactant functions, but excludes dyes, pigments, enzymes and finished detergent products for household laundry.

The industry chain includes fatty alcohols, ethoxylates, sulfonates, quaternary ammonium compounds, solvents, additives, stabilizers, water, packaging materials and chemical reactors. Midstream production covers synthesis, neutralization, blending, concentration adjustment, filtration, quality testing, storage and packaging. Downstream demand comes from textile mills, dyeing and finishing plants, printing factories, garment washing, fiber producers and technical textile manufacturers. Growth is driven by textile output, functional finishing, water-saving processes, low-foam formulations and demand

for more sustainable auxiliaries.

Textile surfactants are essential auxiliaries in textile printing and dyeing, finishing and washing processes, used to improve dyeing uniformity, softness and stain resistance. Their core advantages include high permeability, good emulsification, low foam and environmental friendliness. Market demand is driven by the upgrading of textile industry and demand for high-quality fabrics. Going forward, products will develop towards biodegradable and multi-functional formulas.
