The global Textile Waste Recycling Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Textile Waste Recycling Machine is a type of machine that is designed to recycle textile waste, which includes various types of used or discarded textiles such as clothing, fabric scraps, yarn waste, and other textile materials. These machines use mechanical or chemical processes to break down the textile waste into fibers, which can be reused to manufacture new textile products. The mechanical textile waste recycling machine usually involves shredding, cutting, carding, and spinning of the textile waste, while chemical textile waste recycling machines use solvents, enzymes, or other chemical processes to dissolve or break down the textile fibers. The advantages of textile waste recycling machines include reducing the environmental impact of textile waste by preventing it from entering landfills or waterways, saving energy and resources by reusing textile fibers, and creating new opportunities for sustainable textile production.
