## Abstracts

The global Therapeutic Bandage Contact Lens market size is predicted to grow from US\$ 1972 million in 2025 to US\$ 3112 million in 2032; it is expected to grow at a CAGR of 6.8% from 2026 to 2032.

Therapeutic bandage contact lenses are soft medical-grade contact lenses used to protect the corneal surface, promote epithelial healing, reduce pain, and provide a barrier against mechanical irritation following ocular surgery, trauma, or corneal disorders. These lenses are typically made from silicone hydrogel or high-oxygen-permeable materials and are prescribed by ophthalmologists for short-term therapeutic use. From a value chain perspective, upstream includes medical-grade polymer suppliers, silicone hydrogel manufacturers, sterilization solution providers, and packaging material suppliers; midstream focuses on lens molding, hydration control, surface treatment, sterilization, quality testing, and regulatory certification; downstream demand comes from hospitals, ophthalmology clinics, ambulatory surgical centers, and specialty eye care providers. In 2025, the average selling price of therapeutic bandage contact lenses is approximately US\$42.00 per unit, with global sales volume reaching around 48 million units. The industry maintains a gross margin of 50%-68%, supported by medical device certification barriers, brand trust, and clinical application specificity.
