The global Thermal Arc Spray System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Wire arc spray involves two consumable metal or alloy wires. When fed into the spray gun, the twin wires which are electrically charged with opposing polarity will create arc while contacting each other at the designated position in front of the gun. The heat of the arc melts the metal wires, and the melting material is atomized by compressed air into particles and sprayed onto the surface of a substrate. The two wires are fed into the arc spray gun simultaneously at a constant rate and by this way, arc spray can carry out large area of coating operations.

The Thermal Arc Spray System is a key technology widely used in the fields of metal coating and surface repair, offering promising market prospects. With the continuous advancement of industrial automation and environmental requirements, the thermal arc spray system finds extensive applications in industries such as aerospace, automotive manufacturing, marine engineering, and energy. The market size is expanding steadily with increasing sales, and its specific uses include corrosion-resistant coatings, thermal barrier coatings, and surface repairs. Future developments will focus on enhancing spray efficiency, reducing energy consumption, developing new materials, and integrating intelligent control systems to meet the growing market demands.
