A thermal conductive adhesive sheet, also known as a thermal adhesive pad or thermal conductive tape, is a type of material used to provide efficient thermal conduction and heat dissipation between two surfaces. It is designed to bond two objects together while also facilitating the transfer of heat between them. These sheets are commonly used in electronic devices, computer components, LED lighting, automotive applications, and other industries where effective heat management is crucial.

The growing demand for consumer electronics, such as smartphones, tablets, laptops, and wearable devices, has led to a higher need for effective thermal management solutions. Thermal conductive adhesive sheets are used to dissipate heat generated by electronic components, ensuring their proper functionality and longevity.
