MCPCB is a PCB that uses metal materials as the dormant part of the circuit board. MCPCB is composed of a thermal conductive layer (diIMS layer), metal plate and copper foil. It has special magnetic permeability, excellent refrigeration performance, high strength and good processing performance. The purpose of the MCPCB core is to conduct heat away from critical PCB mechanical components to less critical areas such as the metal support backing or metal core. Common base materials for metal core PCBs are aluminum, copper, or a mixture of copper-specific metal alloys.
