The global Thermal CTP market size is predicted to grow from US\$ 337 million in 2025 to US\$ 335 million in 2031; it is expected to grow at a CAGR of -0.1% from 2025 to 2031.

CtP refers to the process of imaging digital printing data (created by a computer) directly onto a printing plate. A thermal CtP recorder uses a high-power near-infrared laser to image digital printing data onto specially processed aluminum-base printing plates. CtP completely eliminates the need for film output and subsequent film to plate image transfer. Since processing is completely digital, there are no variations between plates, which results in superior printing quality.

Thermal CtP offers more vivid image reproduction and higher quality than violet CtP. Thermal CtP can also be used in a daylight environment, which both eliminates the need for a darkroom and makes operation much more convenient.

Global Thermal CTP key players include Kodak, Screen, Heidelberg, Agfa, etc. Global top four manufacturers hold a share over 55%.

China is the largest market, with a share about 50%, followed by Japan, and Europe, both have a share about 40 percent.

In terms of product, Semi-automatic CTP is the largest segment, with a share over 35%. And in terms of application, the largest application is Business, followed by Newspaper, Business or packaging Mix, Packaging, etc.
