The global Thermal Cured Hardcoat market size is predicted to grow from US\$ 534 million in 2025 to US\$ 854 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

Hard coatings are a specially formulated treatment which are applied to plastic substrates in liquid form and cured, usually using heat or UV energy. Both technologies offer very similar end results ? hard coatings with abrasion and chemical resistance. However, the chemistry behind both is very different. Thermally cured coatings are applied to the substrate and then exposed to high temperatures for a period of time.
