Thermal curing solder resist ink is a type of protective coating used in the manufacturing of printed circuit boards (PCBs) and other electronic components. This ink is applied to the surface of the PCB and then cured using heat to form a hard, durable layer that protects the underlying circuitry from damage during soldering and operation. The thermal curing process ensures that the solder resist ink achieves optimal adhesion, chemical resistance, and thermal stability, making it suitable for high-temperature applications. This type of solder resist ink is commonly used in industries such as automotive, aerospace, consumer electronics, and industrial machinery where electronic components must withstand elevated temperatures and harsh operating conditions.

The global Thermal Curing Solder Resist Ink market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
