The global Thermal Double Layer CTP Plate market size is predicted to grow from US\$ 2033 million in 2025 to US\$ 3075 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

Thermal double-layer CTP plate is an offset printing plate used in the printing industry and is mainly used in digital plate making (CTP, Computer-to-Plate) technology. It has two main layers: Thermosensitive layer: Thermosensitive material responds to heat, usually by transferring image information to the plate via a laser during exposure. Laser heating causes chemical changes in the coating in specific areas, creating an image. Base layer: The material that supports the thermal layer and is used to withstand the pressure and other operations generated during the printing process. The advantages of thermal double-layer CTP plates include improved printing quality, reduced production time, reduced chemical usage, and improved production efficiency. It is widely used in commercial printing, packaging printing and other fields.

United States market for Thermal Double Layer CTP Plate is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
