The thermal field system is one of the key components in the crystal production process. Taking the production process of monocrystalline silicon wafers as an example, it includes crystal pulling and slicing, and the crystal pulling process needs to melt the silicon material in a heating environment first, and then go through seeding, necking, shouldering, equal-diameter growth, and finishing. and other steps are made. The thermal field is a consumable in the process, and its components include crucible, guide tube, heat preservation tube, heater, etc.
