Thermal fogger drone is a drone device with a thermal fog spraying system mounted on it, using a plant protection drone as a carrier. Its working principle is to spray a liquid mixed with water, pesticides, diesel and thermal fog penetration stabilizer at a very high speed (such as 814 meters per second) through a high-speed rotating atomizing disk or similar atomizing device, and quickly change the liquid from large particles to small particles (usually below 50 microns and above 5 microns), forming tiny droplets, achieving a 360-degree full coverage atomization effect.

United States market for Thermal Fogger Drone is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
