Thermal gap filler materials for EVs are substances designed to fill the gaps between electronic components and heat sinks or other surfaces, facilitating the transfer of heat away from critical components like batteries, power electronics, and electric motors. These materials are crucial for managing heat dissipation in electric vehicles (EVs) to ensure optimal performance and reliability.

Thermal gap fillers are typically soft, compressible materials with high thermal conductivity properties. They conform to uneven surfaces and fill small gaps and air voids, minimizing thermal resistance and maximizing heat transfer efficiency. This helps in dissipating heat generated during the operation of EV components, preventing overheating and potential damage.

The global Thermal Gap Filler Materials for EVs market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
