The global Thermal Imager Core market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Thermal imager cores are the heart of thermal cameras. They consist of an infrared sensor array that detects thermal radiation and converts it into an electrical signal. This signal is then processed by an onboard processor, which applies algorithms to create a digital image of the scene based on the thermal data. The resulting images show the temperature variations within the scene, with warmer objects appearing brighter and cooler objects darker. Thermal imaging camera cores are used in various applications, including surveillance, firefighting, industrial inspection, and medical imaging.
