Thermal imaging is defined as the means by which infrared portion of the light spectrum can be seen by human beings. Thermal imaging is also referred as thermography, IR, thermal scanning and infrared imaging. Every object gives off some amount of thermal radiation. Thermal imaging observes temperature anomalies that are abnormal in electrical equipment, machinery, woods, fiberglass, steel and aluminum. Cameras used in thermal imaging can be used in absolute dark. Thermal imaging is used in various applications such as military, sea navigation, industry, law enforcement, oil and gas industry, mining industry etc. Oil and gas industry utilizes the benefits of thermographic surveys.
