According to our LPI (LP Information) latest study, the global Thermal Inkjet Inks market size was valued at US\$ million in 2023. With growing demand in downstream market, the Thermal Inkjet Inks is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Thermal Inkjet Inks market. Thermal Inkjet Inks are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Thermal Inkjet Inks. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Thermal Inkjet Inks market.

Thermoink-jet inks are used as printing materials in thermoink-jet printers, which are heated to 300 degrees Celsius. When heated, the ink forms a consistent solution and is expelled through the nozzle. Thermal-inkjet ink can stay on the substrate for longer, improving printing efficiency, reducing ink waste, making it cheaper and helping to reduce the global carbon footprint, compared with the problem of ink remaining at room temperature, which causes ink to clog up. They have high adhesion, friction resistance and excellent clarity. Widely used for printing bar codes, labels and receipts.
