The global Thermal Oil Heater market size is predicted to grow from US\$ 1522 million in 2025 to US\$ 2082 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

In 2024, global Thermal Oil Heater production reached approximately 35440 units , with an average global market price of around K US\$ 42 per unit. Thermal Oil Heater is a kind of industrial temperature control equipment which takes heat transfer oil as circulating medium, heats by fuel or electric energy, and transfers heat energy by forced liquid circulation with circulating oil pump.

Market Concentration and Major Players:

Internationally, the market concentration of thermal oil heater is relatively high, mainly concentrated in developed countries such as Europe, America and Japan. For example, ESS and HTT and other large manufacturers; from the domestic point of view, there is still a lot of room for development of thermal oil heater.

Manufacturing Processes and Market Trends:

Thermal oil heater manufacturing process focuses on high temperature sealing technology and precision manufacturing: the core uses double ? ring sealing structure and seamless boiler tube, through argon arc welding process and nondestructive testing to ensure high temperature pressure stability; The key links include the compression tooling welding of omega ring seals, the stress relief treatment of tube sheet surfacing, and the control of ovality in the small-specification welding of shell flanges. At the same time, intelligent temperature control modules and waste heat recovery systems are integrated to meet the requirements of safe operation at high temperature and low pressure.

The market trend is to green and intelligent collaborative upgrade evolution, of which intelligent products account for more than 40%; environmental protection policy drives the popularization of biomass fuel application, thermal efficiency improvement, energy saving compared with traditional models, while Industry 4.0 promotes modular design and high-voltage electric heating technology to promote the permeability improvement in petrochemical and food dehydration fields; The intensification of international competition has prompted local companies to strengthen the R & D of high temperature materials and the export layout of 'One Belt and One Road', and reduce the full cycle cost through synthetic heat transfer oil and explosion-proof safety interlock.
