The global Thermal Paper market size is predicted to grow from US\$ 3391 million in 2025 to US\$ 4266 million in 2031; it is expected to grow at a CAGR of 3.9% from 2025 to 2031.

Thermal paper is a special paper type that is manufactured with specialty coating that aids in inkless printing. On application of heat to the coating, a clear image is formed on the paper with no requirement for ribbons or inks. The coating usually turns black on heating, which, in turn, transfers the image to the paper. Thermal paper is the key component of thermal paper printing, which is considered one of the most economical printing technologies owing to its low energy consumption and low maintenance cost. The paper may be used as fax paper on fax machines, as thermal recording paper on cardiographic or industrial recording devices, or converted to ATM rolls or POS rolls for ATM or Place of Sale applications. Thermal paper with additional top-coat or semi top-coat may be used for logistic and supermarket labels, lottery tickets, train tickets, and many other applications.

The thermal paper market presents numerous growth opportunities driven by e-commerce and retail expansion, alongside emerging trends in technology and sustainability. However, challenges such as raw material costs and competition from alternative technologies need to be navigated carefully. Companies must remain vigilant about risks related to economic fluctuations and supply chain vulnerabilities to maintain a competitive edge in this evolving market.

The global key companies of Thermal Paper include Oji, Koehler, Hansol, Xianhe Co., Ltd., Appvion, Mitsubishi HiTec Paper, Ricoh, Guan hao High-tech, and Jianghe Paper, etc. In 2023, the global five largest players hold a share approximately 57% in terms of

revenue.
