The global Thermal Resistance Tester market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The Thermal Resistance Tester is an advanced instrument for testing the thermal characteristics of semiconductor device packages, providing data on the thermal characteristics of all types of packages in a matter of minutes. The device provides a non-destructive method of thermal testing by varying the power input to the electronic device and testing the device's thermally relevant parameters to test the transient temperature change curve of the electronic device; numerically processing the temperature change curve to extract a structure function; and automatically analysing thermal property parameters such as thermal resistance and thermal capacity from the structure function.

United States market for Thermal Resistance Tester is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
