Thermal scanner is a device that uses photoelectric technology and digital processing technology to convert graphics or image information into digital signals in a scanning manner. Thermal scanners can be divided into fixed and mobile devices. The fixed type segment accounts for the largest share of the thermal scanner market. Thermal scanners are very popular in the industrial and commercial fields. For example, the recent outbreak of coronavirus in China and other foreign countries has fixed thermal scanners set up in airports and railway stations, factories and other congested areas such as commercial buildings. These scanners find widespread use in conducting large-scale screenings of people to detect body temperature. With the outbreak of the coronavirus, more airports are expected to adopt thermal scanners across the globe.
