Thermal storage ceramic ball is a thermal storage element made of ceramic materials, usually in a spherical or spherical shape. It is mainly made of alumina (Al₂O₃), kaolin, quartz, feldspar and other materials in a certain ratio, and is rolled or pressed and then fired. Thermal storage ceramic balls have many excellent properties, including high strength, wear resistance, large thermal conductivity and heat capacity, high thermal storage efficiency, and good thermal stability. These characteristics make thermal storage ceramic balls particularly suitable for use as thermal storage fillers in occasions such as air separation equipment regenerators and blast furnace gas heating furnaces in steel plants. In addition, thermal storage ceramic balls can also be customized according to specific needs to meet the use requirements of different occasions. For example, they can be produced according to different diameter specifications to adapt to different equipment sizes and process requirements. At the same time, the appropriate material ratio and molding process can be selected according to the specific application scenario to optimize the performance and use effect of the product.

The global Thermal Storage Ceramic Balls market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
