A thermal-wet gas abatement system is a specialized technical device designed to handle emissions from combustion processes involving wet gases. Its core function is to remove or transform gases such as moisture, acidic gases, particulates, or volatile organic compounds from wet gases using physical, chemical, or thermodynamic methods, ensuring that the emissions meet environmental standards. The significance of this system lies in its purpose to effectively control the emission pollution from wet gases during combustion, protect the environment, and enhance efficiency while extending equipment lifespan. The main benefits include significantly reducing harmful emissions, minimizing environmental pollution, optimizing energy utilization efficiency in combustion, and lowering the risk of equipment corrosion. In terms of functionality, the system typically integrates modules for dehumidification, filtration, chemical absorption, or catalytic conversion, capable of capturing pollutants, ensuring stable operation, and adapting to the gas characteristics under various combustion conditions, providing reliable support for sustainable operation.

United States market for Thermal-Wet Gas Abatement System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
