The global Thermally Stable Polycrystalline (TSP) market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Thermally Stable Polycrystalline (TSP) is produced by sintering diamond particles with an inert binding agent under high temperature and ultrahigh pressure, resulting in a material that can withstand temperatures up to approximately 1200°C. TSP is characterized by its high heat resistance and exceptional thermal stability, making it suitable for various high-temperature applications. It can be manufactured in diverse shapes, such as cubes, cylinders, rectangles, triangles, and arcs, to meet the specific requirements of drilling tools and geological applications. TSP is primarily used for wear protection in petroleum and geological drill bits, sucker rod reamers, wire drawing dies, cutting tools, and other wear-resistant components, providing durability and enhanced performance in demanding environments.

United States market for Thermally Stable Polycrystalline (TSP) is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
