Thermistors for inrush current limiters are variable resistance devices used in inrush limiting. The inrush current is the momentary high input current drawn by a power supply or electrical device when it is turned on, charging capacitors and inductors or transformers and therefore requiring a high initial current. Inrush current limiter thermistors help protect equipment from damaging inrush currents when they start up or

turn on, helping to reduce damage to downstream components and avoid accidental opening of fuses or tripping of circuit breakers.
