Façade Materials are the architectural materials that are used for increasing the aesthetics of a building. These constructional materials are usually used at the entrance part of the building. Besides just giving an aesthetic feel to the building, these materials can also be used for energy recreation. Building façades can be manufactured using various materials including but not limiting to glass, fiber, cement, wood, solar panels and metal. Façade materials are more about edifice aesthetics and are of a great significance for the design of the same. These are not only used for high rising buildings and offices but also for decorating storefronts and residences. Façade materials have been in use since twelfth century and have been in development ever since then.
