The global Thermocouple Pyrometer market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Thermocouple Pyrometer is an instrument used for measuring high temperatures based on the principle of thermocouples, which are temperature sensors made from two dissimilar metals.

Thermocouple pyrometers operate on the thermoelectric effect, where a voltage is generated when the junction of two different metals is exposed to a temperature gradient. This voltage is proportional to the temperature difference and can be measured to determine the temperature.
