The global Thermoelectric Cooling Line Scan Camera market size is predicted to grow from US\$ 118 million in 2025 to US\$ 168 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

Electrical cooling technology reduces thermal noise by lowering the temperature of the image sensor through the Peltier effect. This process effectively reduces dark current noise, allowing the camera to provide clear images even in long exposures or low light conditions. Electrically cooled line scan cameras are high-precision imaging devices designed specifically for applications that require line-by-line scanning. Through electrical cooling technology, these cameras are able to effectively reduce the noise level of the sensor, thereby providing high-quality images in low light conditions or long exposures.
