Thermoplastic fixation plate is a medical device used to fix and stabilize fractures or other body bone injuries. It is made of thermoplastic materials that can be heated and molded to adapt to the shape of affected body parts, providing customized fit for each patient. Thermoplastic fixation plates are commonly used in orthopedic clinics and hospitals to treat various injuries such as fractures, sprains, and strains. It aims to

provide support and fixation for the affected area, helping to promote healing and prevent further harm. Thermoplastic fixing plates are usually used by medical professionals who soften them by heating them in water or using a hot air gun, and then shape them into the shape of the affected body part. Once the steel plate cools and hardens, it provides a rigid support structure that helps secure the affected area.
