The global Thermoplastic Silicone Elastomer market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Thermoplastic silicone elastomer, referred to as Si-TPV or TPSiV, also known as silicone thermoplastic elastomer, refers to a composite material with the excellent properties of silicone rubber and thermoplastic plastics. TPSiV has the advantages of high elastic modulus, strong thermoplastic processing ability, high strength, and good self-healing ability. It is widely used in consumer electronics, automobile manufacturing, medical and health, aerospace, sports equipment and other fields.

According to the different substrates, TPSiV can be divided into three types: polyurethane-based TPSiV, nylon-based TPSiV and polyolefin-based TPSiV. Polyurethane-based TPSiV, also known as TPU-based TPSiV, has the advantages of good physical and mechanical properties and good bonding properties, and can be used to manufacture artificial leather materials; nylon-based TPSiV has the advantages of good tensile properties and high melt strength, and can be used to manufacture various types of pipes; polyolefin-based TPSiV has excellent low temperature resistance and flexibility, and is the TPSiV with the widest application range. In the future, with the increasing demand for the application of segmented products, the prosperity of the TPSiV industry will be further improved.

United States market for Thermoplastic Silicone Elastomer is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
