Thick film devices are single-layered or multi-layered structures and are made up by the deposition of a formulated paste on a substrate. The substrate can be made of various materials such as ceramic, polymeric, and metallic. The layer deposited on the substrate facilitates electrical, mechanical, or chemical functionality for the device, in which the layer is fabricated.

One of the main trends witnessed in the global thick film Devices market is the increasing focus on energy management. The governments in various countries have introduced stringent regulations on power consumption, forcing manufacturers to reduce energy consumption. The need to reduce power consumption has driven many organizations to adopt industrial microcontrollers.
