The global Thick-Film Photoresist Stripper Solution market size is predicted to grow from US\$ 546 million in 2025 to US\$ 866 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

Thick-Film Photoresist Stripper Solution is a low etching stripper solution for cleaning a thick photoresist. The low etching photoresist stripper solution comprises potassium hydroxide, a solvent, an alcohol amine, and a polynary composite corrosion inhibitor system. The photoresist stripper solution is useful for removal of a photoresist or other residues on a metal, a metal alloy, or a dielectric substrate, and has a low etching rate for a metal such as copper, aluminium, tin, lead, and silver, and thus has a good application prospect in the field of microelectronics such as semiconductor chip cleaning.

Some of the market drivers for thick-film photoresist stripper solution are the growing demand for energy-efficient data centers, the rapid deployment and scalability of modular solutions, the innovation of new technologies and designs to improve performance and convenience, and the expansion of distribution channels and target markets.

Some of the constraints of thick-film photoresist stripper solution are the high cost of maintenance and cleaning, the potential health risks of cooling fluid contamination or leakage, the environmental concerns of using refrigerants and water, and the competition from other cooling options.

Some of the future opportunities for thick-film photoresist stripper solution are the development of healthier and organic cooling fluids and chips, the creation of

customized and personalized cooling experiences, the integration of liquid cooling systems and infrastructure, and the adoption of green data center practices.
