The global Thickened U-Shaped Silicon Carbide Rod market size is predicted to grow from US\$ 51.40 million in 2025 to US\$ 80.71 million in 2032; it is expected to grow at a CAGR of 6.8% from 2026 to 2032.

In 2025, global production of thickened U-shaped silicon carbide rods reached 1.42 million units, with an estimated average selling price of US\$37 per unit. Thickened U-shaped silicon carbide rods are a type of non-metallic high-temperature heating element made primarily from high-purity silicon carbide through processes such as blank preparation, high-temperature silaneization/recrystallization, end metallization, and resistance matching. Two silicon carbide rods with similar resistances are connected in a U-shape by a thickened bridge section, ensuring that the two terminals are located on the same side of the furnace body. They are mainly used in pusher furnaces, box furnaces, bogie furnaces, roller kilns, ceramic sintering furnaces, glass melting and annealing furnaces, powder metallurgy furnaces, metal heat treatment furnaces, magnetic material sintering furnaces, electronic ceramics, and laboratory high-temperature furnaces. The upstream of the industry chain mainly includes green silicon carbide powder, petroleum coke/silica/carbon materials, binders, aluminum metal spraying materials, ceramic insulation components, fixtures, and packaging materials; the midstream includes silicon carbide rod forming, sintering/recrystallization, resistance sorting, end metallization, size customization, and furnace heating element assembly; the downstream includes industrial furnace manufacturers, ceramic and refractory material companies, glass companies, powder metallurgy and metal heat treatment companies, electronic ceramic/semiconductor material companies, and laboratory equipment manufacturers. Gross profit margin is approximately 20%-40%.
