Thin film platinum resistance sensor is a platinum resistance sensor manufactured using thin film technology. During the manufacturing process, a thin film of platinum is deposited on the base material, forming a thin film layer that acts as a resistive element. Thin film platinum resistance sensors usually have smaller size and faster response speed, while also having good stability and high-precision temperature measurement capabilities. This sensor can provide accurate temperature measurement over a wide temperature range and is suitable for applications requiring high-precision temperature control, such as medical, laboratory, industrial automation, etc. Thin film platinum resistance sensors are commonly used in thermometers, temperature control systems and other temperature sensing equipment.

The global Thin Film Platinum Resistance Sensor market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
