Thin Layer Rust Preventive Oil is an oil product with specific chemical compositions and protective properties. It is formulated from base oil, rust preventive additives, and other auxiliary components. The base oil provides the basic functions of lubrication and film-forming carrier for the rust preventive oil, while the rust preventive additives endow it with excellent anti-rust characteristics. The oil can form an extremely thin and uniform protective film on the metal surface, which effectively isolates the metal from contact with moisture, oxygen, and corrosive media in the external environment, thereby inhibiting the electrochemical and chemical corrosion processes of the metal. Its thin-layer property ensures that, while providing good anti-rust effects, it does not significantly affect subsequent processing, assembly, and other operations of the metal. It is widely used in fields such as machinery manufacturing, metal processing, and storage and transportation to extend the service life of metal products.

United States market for Thin Layer Rust Preventive Oil is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
