The global Thioether Antioxidants market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

Thioether Antioxidants is special thioether auxiliary antioxidants, good long-term heat resistance. It is usually used in combination with phenolic antioxidants and provides significant long-term thermal stability to the polymer. It can show significant synergistic effects on long-term thermal stability especially at high temperatures. Compared to conventional sulfur ethers such as DLTPD or DSTDP, they are effective at low load levels due to their higher sulfur content. Exhibit very low volatility, excellent polymer resistance to extraction, and excellent polymer retention due to high molecular weight. It is effective even in polymers used under harsh conditions such as high temperatures or contact with hot water.

United States market for Thioether Antioxidants is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
