The research report highlights the growth potential of the global Thiuram Accelerator market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Thiuram Accelerator are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Thiuram Accelerator. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Thiuram Accelerator market.

Thiuram Accelerators are very fast and effective sulfur cure accelerators. They can be used for all common unsaturated rubbers including NR, IR, SBR, BR, and NBR. Like some sulfenamides, most thiurams have two or more sulfur atoms in the sulfur bridge. These compounds not only function as accelerators but also act as sulfur donors, i.e. allow for 'sulfur-less' cure. They are often used in systems with low or no sulfur content and for rubbers with low unsaturation like IIR and EPDM. Often metal oxides are added which bind the released dithiocarbamic acid and prevent accelerated oxidative degradation.
