The global Thoracic Catheters market size is predicted to grow from US\$ 425 million in 2025 to US\$ 624 million in 2031; it is expected to grow at a CAGR of 6.6% from 2025 to 2031.

Thoracic catheter is a flexible plastic tube that is inserted through the chest wall and into the pleural space or mediastinum. It is used to remove air (pneumothorax) or fluid (pleural effusion, blood, chyle), or pus (empyema) from the intrathoracic space. It is also known as a B?lau drain or an intercostal catheter.

The thoracic catheter is connected to a closed chest drainage system, which allows for air or fluid to be drained, and prevents air or fluid from entering the pleural space. The system is airtight to prevent the inflow of atmospheric pressure. Because the pleural cavity normally has negative pressure, which allows for lung expansion, any tube connected to it must be sealed so that air or liquid cannot enter the space where the tube is inserted.

The major players in global Thoracic Catheters market include Medtronic, Teleflex, Smiths Medical, etc. The top 3 players occupy about 60% shares of the global market. North America and Europe are main markets, they occupy about 65% of the global market. Catheter is the main type, with a share over 90%. Pleural Effusion is the key application, which holds a share about 50%.
