A thread-cutting tool is a machining tool capable of processing female threads through helical interpolation using a machining center or an NC milling machine. The processing machine must, therefore, be capable of helical interpolation.

Unlike ordinary taps, milling in machining offers low cutting resistance and a reduced risk of breakage. Even in the unlikely event of breakage, the tool can be easily removed. Various thread diameters can be processed by altering the program, provided the thread pitch remains the same.

The global Thread-Cutting Tool market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
