A threaded steel rebar coupler is a mechanical device used in construction to connect two steel reinforcement bars (rebars) together. It consists of a threaded sleeve that is screwed onto the ends of two rebars, providing a strong mechanical connection. This method allows for the transfer of loads between the rebars and maintains the continuity of reinforcement in concrete structures. It eliminates the need for overlapping rebars at joints, simplifying construction and enhancing the structural integrity of reinforced concrete elements.

The global Threaded Steel Rebar Coupler market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
